INTRODUCTION

This field study will be a summation of my findings regarding the characteristics of the Cocoa Black Cemetery, renamed the Cocoa Hilltop Cemetery in the late 1950's, which can be found in Cocoa, Brevard County, Florida. Brevard County is located on Central Florida's east coast and is approximately sixty-five miles long and forty-five miles at its widest point. Cocoa is approximately in the center of the county, flanked on the west by the St. Johns River on the East by the Indian River and ten miles from the Atlantic Ocean.

After visiting many older cemeteries within the Brevard County area, I chose this cemetery due to its age and associated ethnic uniqueness. As I have been a resident of Cocoa for over 35 years, during my younger years I was only aware of one cemetery in the city, the Cocoa Cemetery. I discovered many years later this cemetery was earmarked only for white people and a separate cemetery slightly north was designated for the black residents of Cocoa. This cemetery was established during the 1880's, shortly after the abolishment of slavery. It is currently recognized as a "closed" cemetery, with the exception of family members who choose to be included within their family plots. The oldest gravestone located was dated 1889 with the most recent being in February 1997.

Due to the size and number of gravesites within this cemetery, I divided this cemetery into 5 sections, beginning at the southeast point (see Appendix F and G). I have included a site layout map for each section, with the deceased indexed by both section

and in alphabetical order. By using the maps and indexes, visitors will be able to locate the site they are seeking rather easily.

Within this field study I will be describing the history of this area, location of the cemetery, land topology, plot layout within the cemetery, indexing of the gravestones, and the tombstone, tablestone, and vault characteristics, including my analysis of each. From this field study, you will gain an increase knowledge of the ethic and social culture of the black population residing within this area during the past century.

History of Brevard County and Cocoa

To gain an understanding of this cemetery's origin and ethnic uniqueness, one needs to have an awareness of the history associated with eastern central Florida. This area was originally settled by the Seminole, Ayes, Aztecs, and Chichimecs Indians. In the early 1500's the Spaniards moved in. From 1763-1783 the English occupied this area returning it to Spain in 1783. In 1821 the east coast of Florida was sold by Spain to the United States as part of the territory of Florida. In 1822 this area was named St. John's County, as was most of the east coast of Florida, due to the St. Johns River running through it. In 1824 it was renamed Mosquito County and then renamed St. Lucie County in 1844. In 1855 the name was changed one last time to Brevard County, named after the controller for the State of Florida at that time, Judge Theodore Brevard. In 1860 it was recorded that only 45 settlers resided within Brevard County.

With the only means of transportation into this region being by waterway and due to the inharmonious nature of the sub-tropical climate, it was very laborious for new settlers to establish homesteads. In the diary of L. C. Crofton, one of the early settlers of Brevard County, he wrote "Some of the early struggles of pioneers were pathetic with hardship. There was little money, and the effort to foster enterprises of any kind required greater heroism and courage of a sterner quality than those of a later day and more prosperous times."

By 1880, the settlement of Cocoa was established, named after the lush Cocoa Plum which grew wildly at this location. Thanks to the expansion of the railroad, the entire

east coast of Florida was open to traffic by 1886. As the major cities to the north, Ormond Beach, Daytona Beach, and Jacksonville, were becoming well known world wide for their tourist industry, the settlement of Cocoa moved toward this direction. In 1895 this area was incorporated as the City of Cocoa. A major contributing factor was the establishment of the Indianola Hotel, an elegant 400 room gas-lighted resort nestled on the Indian River in Cocoa, which was deemed as futuristic for its time. It is noted from reviewed writings that 20 families resided Cocoa at that time, but growth began very fast due to the service sector employment needs. But, some of the pioneers were also expanding into another industry. The Parrish's, Crissifulli's, Polichicco's and other pioneers began "opening the virgin soil, and in the strength and hope of young manhood set cut fruit and planted groves, ... Their fine groves are the pride of the east coast, ..." (L.C. Crofton). This was the beginning the largest industry in Florida, citrus, and of the world-wide acclaimed Indian River Citrus Fruit Belt.

The majority of the early settlers arrived in this area from other southern states, many bringing their slaves with them. When slavery was abolished in 1865, many of these black people remained in this area performing citrus, ranching, and service labor.

During the late 1890's, one of the early settlers, Mr. Dixon, donated acreage to the City of Cocoa for the establishment of a public cemetery. The northern section, located farthest from the heart of the city, was designated for black people and the southern section for white people. The city of Cocoa continued growing to the estimated population of over 2,000 by 1942. Some of this donated land was determined not needed by the city and sold to private enterprises or utilized for public streets. Thus, the

Documentation

cemetery was divided creating the Cocoa Black Cemetery and the Cocoa Cemetery, exclusively for white residents. These two cemeteries are approximately 3,000 feet apart, but have always appeared to be dramatically different. The Cocoa Cemetery occupies the corner of one of the major intersections in town, Peachtree Street and U.S. Highway 1. It is very notably decorated with white concrete post fencing with many large old oak trees on this property. It has always been very well maintained by the city. The Cocoa Black cemetery was renamed the Cocoa Hilltop cemetery in the late 1950's due the changing times related to discrimination. As you will note from this field study, the condition and maintenance of this cemetery is subordinate to that of the Cocoa Cemetery.

Cemetery Location

There are two entrances into the cemetery. One entrance is located on the west side of U.S. 1 (North Cocoa Blvd.), two blocks north of Peachtree Street. This driveway is small in size and extremely difficult to locate as it is flanked on each side by commercial businesses. Additionally, the northern business has a large exposed garbage dumpster found directly to the north of the gate (Figure 1).

Figure 1. East Entrance

The second entrance is located on Taft Avenue. From Peachtree Street, go north on U.S. 1 one block and turn left on Main Street. Follow Main Street west and it dead ends on Taft Avenue. The entrance is approximately 500 ft. north on Taft Avenue on the east side of the street. This street is within a district of unpretentious, older commercial manufacturing. A machine shop occupies the space directly across from this driveway. The area to the north of the cemetery is utilized by the City of Cocoa for outdoor storage for used sewer pipes, storm drains, fill dirt, etc and on the south side is another commercial business. The dominant advantage of this entrance is the fencing which

allows a panoramic view of this cemetery. Please see appendix E for detail maps for directions to this cemetery.

Figure 2. West Entrance

I had the opportunity to speak to Mary Dunn, one of the descendants of the Sheffield Family (section 1), as she was visiting the cemetery. Ms. Dunn was raised in a home only a sparse distance from this cemetery. She related a story that back in the late 1940's the City of Cocoa was proposing to relocate this cemetery to another site west of town. This was due to the heightened value of the land and that the majority of the black population of Cocoa resided in the west area of town. This proposal was opposed by the black citizens and the city withdrew their idea after several "heated" city council meetings.

CHARACTERISTICS

Fencing and Gates

There is a fence encircling the cemetery on three sides (East, West and South). The north side is edged by woods and a outdoor city storage area. The fence is fabricated of 1.5 ft. square white concrete block pillars roughly 3.5 ft. high with two 8 ft. black metal poles connecting the pillars together to form the fencing structure. The majority of the pillars are in good condition, but the poles are beginning to display large areas of rust growing.

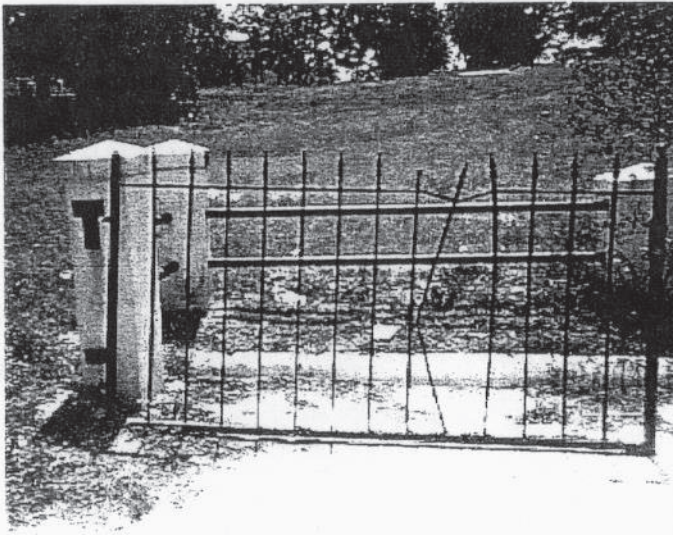

Figure 3. One of the east gates

A pair of gates are located at each entrance. Even though there is not a lichgate at either entrance, it appears that the pillars holding the gates in place were designed for lichgates. Each gate consists of two gate sections having two horizontal and 14 vertical black iron bars. Each vertical bar has a decorative point of a four sided prism. Each gate section is attached by large hinges to a tall white concrete pillar, which serves as part of the fence. Both gates do have locking mechanism, but both are broken. Additionally, one section of the east gate is broken off from the hinges and bent (Figure 3). It is resting by one of the fencing section.

Topology and Plants

Figure 4. View from southeast to northwest

This cemetery encompasses over two acres near the heart of downtown Cocoa. The appearance from the Taft Street side (west looking east) is exquisite due to the topology of this land being very "hilly and rolling". This may be due to its location being only four blocks from the Indian River. I estimate the elevation difference to

be roughly 30 feet between the west and east sides, particularly at the southwest point. From the north side, the change in elevation is not nearly as dramatic. It slopes relatively fast downgrade to flat. This elevation is naturally unique as the majority of the land within the Cocoa area is extremely flat.

There are two major areas of impressively large, old laurel oak trees with large clumps of spanish moss hanging at this site. These areas are located on the southwest and northwest sections (Section 3 and 5), which are part of the oldest sections of this cemetery. There are also several other scattered individual or clumps of trees on this property including cabbage palms, royal palms, live oaks, scrub palms, saw palmetto, pine, and cedar. All of these appear to be wild as several are growing directly beside vaults, to the point of the roots moving the vaults out of the ground and causing

breakage. There are also some wild flowers growing randomly within the old turf grass and weeds throughout this cemetery. There appears to be a very few living plants intentionally planted by any graves sites

Maintenance

This cemetery is maintained by the City of Cocoa. There appears to be no scheduled work day or decoration day. During the past five months I have spend many hours within this cemetery. It appears the city mows this property on various schedules. One time it was over two months between mowings and the grass/weeds had grown over knee high. It also appears the city piles brush and garbage in the driveway during their mowings for pick-up at a much later date, if at all. I have also noted damage which appears to be from the use of large mowers around varied gravestones and vaults.

In 1991 the City of Cocoa installed an underground sprinkler system placing large PVC sprinkler heads standing 3 feet out of the ground for watering with the city's new reclaimed water system. This may have been installed due to the City of Cocoa's Reclaimed Water Processing Plant being less than two hundred feet from this cemetery. Its appearance is somewhat unsightly within the cemetery, but it is functional. I have also noticed random schedules being practiced for watering. Twice the sprinkler system were running continuously for greater than 2 days. This appears to be causing soil damage due to the excessive run-off of water and harming various vaults and gravestones that remain sitting in this water for long periods of time. Therefore, it appears the maintenance of this cemetery is not as adequate as could be expect.

Plot Lay-Out

All of the plots lay in a west to east orientation, with the head placed at the west. From several discussions, it is believed this orientation was decided upon due to the head facing the rising sun in the east every morning. Also noted are several out-of-ground vaults which appear to have been randomly moved and placed in positions other than a west to east orientation. This assumption is based upon several vaults being "shoved under trees" or slid together into small groups. Overall, the majority are in the primary orientation.

Although the grave sites are in a west to east placement, there appears to be no orientation to row placement throughout the cemetery. Vaults and gravestones are randomly placed, with the exception of some family areas. This creates the appearance of "groupings" of rows within areas without actual rows being fully established. Even with the row placement not being consistent, the overall plot-layout appearance of the cemetery is organized and tidy.

Family Plots

Many family plots are located within this cemetery delineated by walls, borders, or fencing either partially or completely encircling them. The majority of the walls are built of mortared or unmortared concrete blocks or bricks. Several are in notably poor condition. The majority of borders are concrete curbs, but there are two unique brick borders. Both have the bricks placed in a diagonal position to the wall, creating a

Figure 5. Fence around family plot

jagged-edge effect. All fences surrounding family plots are constructed of chain link, either 4 foot or less in height. Only two of the fenced sites have gates attached. The majority have either lost their gates or no gate was originally installed. It also appears that sometimes the family members are located within other family plots or outside of their family plot within the cemetery. This may be due marriage within families or the deficiency of space within the actual family plot.

The majority of the husbands are placed to the north of their wife. It is noted although, in several instances a son was placed to the south of his father with his wife on the north side.

Scraped Area

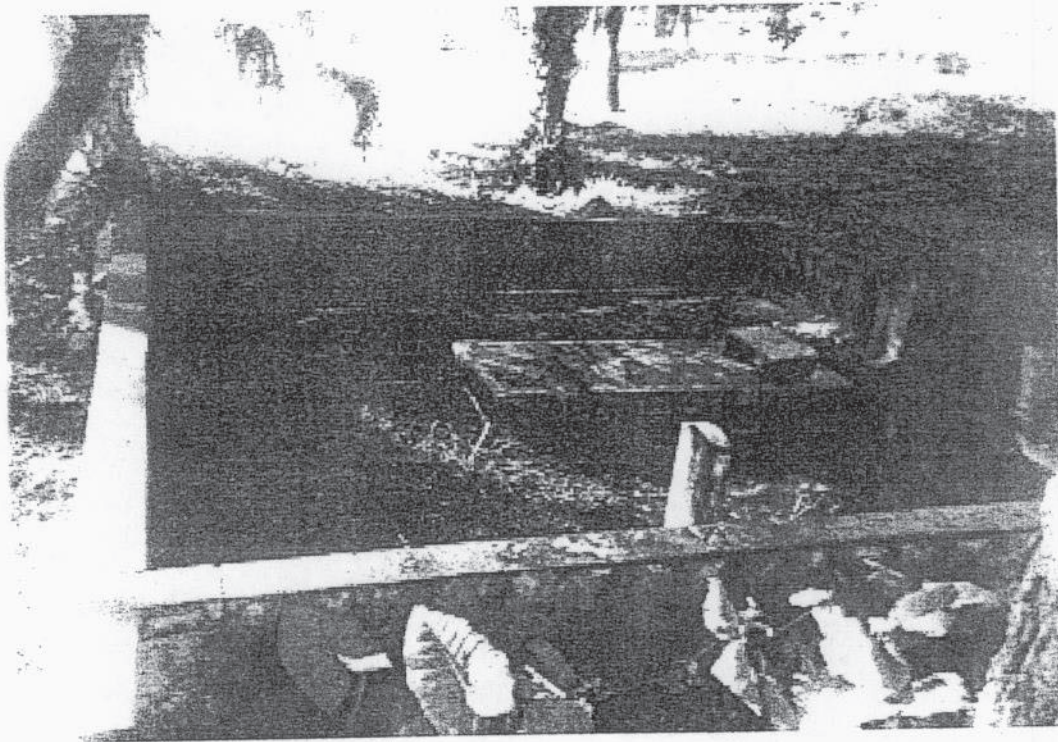

Figure 6. Scraped Area

There is one area within the cemetery which could be considered a scraped area. It is in the far northwest area: the Houston's family plot (section 5). This area contains five family members within the primary walled area and one member in an secondary attached wall area (figure 7). There also appears to be several other family member graves located outside of the walls. The walls are formed of concrete blocks which vary from 2 to 4 blocks high. This area is in a very heavily shaded location due to a large grouping of old oak and pine trees surrounding it. In fact, one of the pine trees has matured within the secondary walled area. The topology inside of the walls are recessed in comparison to the surrounding ground area encircling the walls. Within the walls there is no grass or ground cover except for exposed tree roots and several wild, fast

maturing, small elephant ear plants growing in the very dark, rich soil. This soil also appears to be an oddity due to other soil within this cemetery being light color and sandy. This area has a reclaimed water sprinkler directly to the south of it so it does receive an abundance of water when they are in use.

Other Information

The current caretaker is, according to the local tax records, Ms. Naomi Ford. I sent Ms. Ford several letters to discuss this cemetery with her, but I received no response. This cemetery does not have a gravehouse nor is it divided into sections. It does appear that the west area was the first established due to the dates on the gravestones. The south-east area is the least used. There appears to be no decoration or clean-up days established.

VAULTS AND GRAVESTONES ANALYZED

Table 1. Analysis of Vaults and Gravestones

Random Tile Inlaid	22
Random and Intentional Inlaid Tile	12
Intentional Inlaid Tile	5
Other Decorative Pieces	3
Total Tabletops	1

There are four hundred and seventeen identified grave sites in this cemetery. More graves could be within this cemetery, but due to the lack of maintenance, unmanicured tall grass, and vandalism they were unable to be located. There are no false crypts or gravehouses within this cemetery.

For the purpose of this study, I identified each as vaults as being in or out-of-ground and each gravestone as being flat or upright. In some cases the gravesites are identified as both due to being a vault and having a gravestone. Of the number of grave sites identified, only two hundred and eighty-four are identified my name. This is due to the

lack of markers on many of the vaults and that numerous sites had funeral home type metal markers with black plastic lettering that deteriorated.

Vaults

There are a large of number of vaults, either placed in the ground or left out of the ground. This was one of the most unique features of this cemetery. Of the two hundred fifty-nine vaults identified, forty-

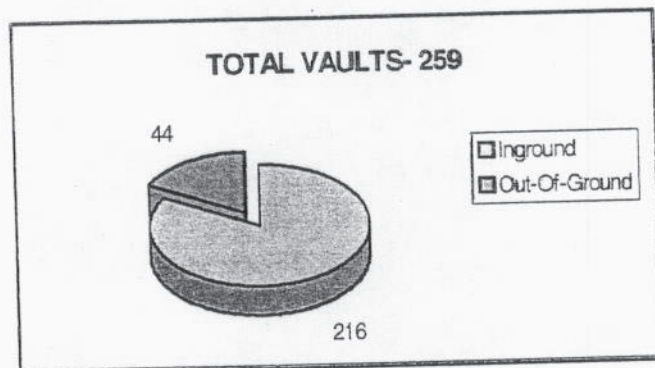

Figure 7 Total Vaults

four were resting totally out of the ground. The large number of out-of-ground vaults appear to be unusual as many of the inground vaults were constructed of the same materials. From my discussions with several local descendants, it is believed there was a cost associated with the digging of the hole so it was a family choice as to whether the vault was in or out of the ground.

Out-of-Ground Vaults

Figure 8. Out-of-ground vaults

All of the out-of-ground vaults are constructed of concrete. Fourteen have a steel u-hooks imbedded in each corner of the top. Thirty-two have the same decorations on all 4 sides. One

being at the foot, one at the head, and three on each side. The decoration is of a full wreath within a squared inlaid area.

Inground Vaults

Of the inground vaults, none appear unusual. The most unique non-decorative type is the fifteen fiberglass vaults. These are not unique based on their quality or decorative nature, but due to the lack of it. All appear to be weathered very badly, to the point of many being just innumerable pieces of fiberglass laying together to form the top. The top of each has a raised area at the head for the placement of the inscription. The majority have no name or the name was not complete due to the loss of lettering from weathering. This lettering is made from black vinyl with an adhesive backing that was used to attach it to the vault.

Decoration

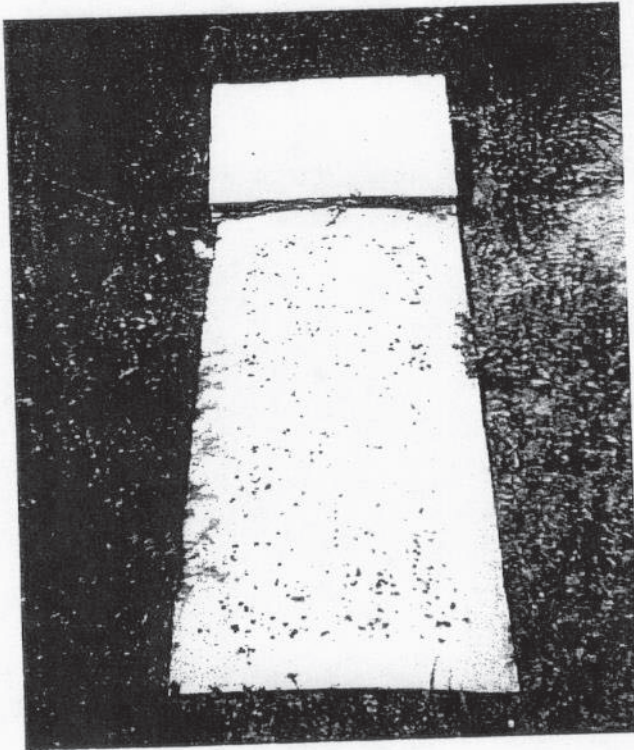

Figure 9. Inground vault with multi-colored pebbles on top

There are no decorations on the top of any of the out-of-ground vaults. The major decoration used in the tops of the inground vaults are small pieces of glass or pebbles imbedded randomly. The majority are either black/white or multi-colored. The rock is reminiscent of the same type of rock material used in the construction of rooftops on homes and businesses in this area of Florida during the 1940's - 1960's.

Figure 10. Random inlaid tile decoration

There is tile used for decoration on the tops of several inground vaults. All of the tile was inlaid either random (Figure 11), random and intentional (Figure 12), or all intentional to form a complete artistic picture (figure 13). There are also several individually designed vault tops. One has a glass block attached directly to the top, one has a large, rough, concrete cross attached to the top, and one has two concrete blocks mortared to the top.

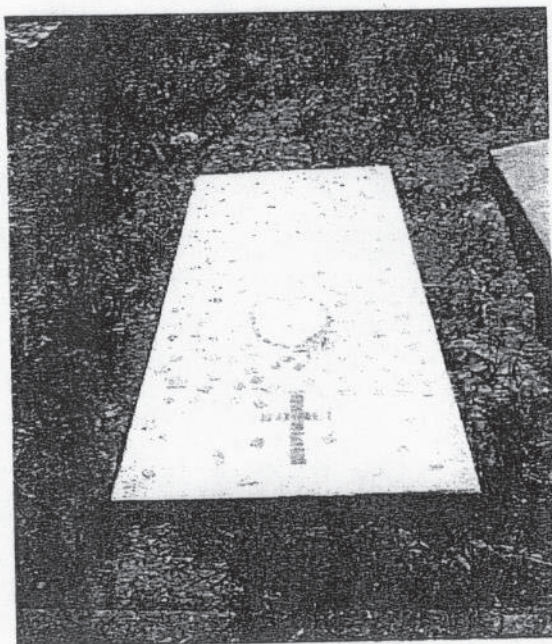

Figure 11. Random and intentional inlaid tile decoration

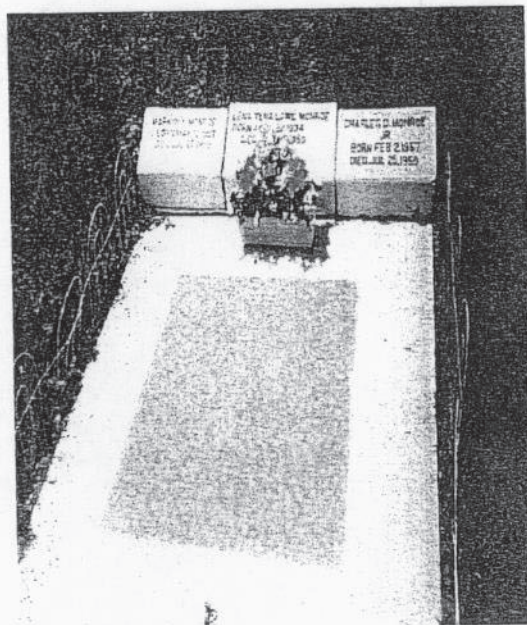

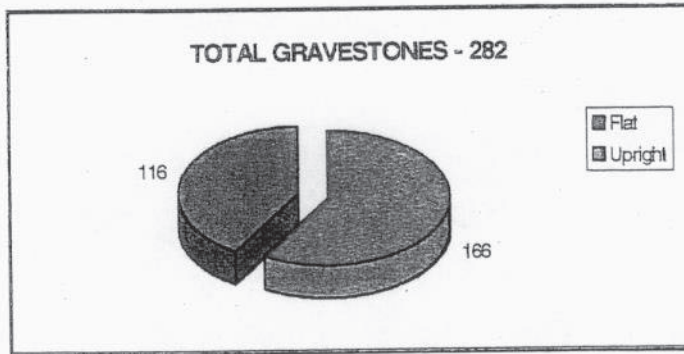

Figure 12. Intentional inlaid tile decoration

Placement

The placement of the vaults are random throughout the cemetery. In two family plots, some vaults are out-of-ground and others inground. There appears to be no structure as to the placement and types of vaults within this cemetery.

Gravestones

Within this cemetery I located two hundred eighty-two gravestones, fourteen with unreadable inscriptions due to weathering. The oldest flat gravestone located is from 1915. The oldest upright

gravestone is from 1889. Of these, I classified them as being upright or flat gravestones.

It appears the majority of the older gravestones are upright. The higher than expected number of flat gravestones are due to the large number of out-of-ground vaults which the majority had flat gravestones, and the classification of the metal marker plates are flat gravestones.

Materials

The following table summarizes the gravestone material used:

Table 2. Construction material of gravestones

MATERIALS	FLAT	UPRIGHT
Concrete	95	54
Metal	35	0
Marble	11	18
Granite	15	32
Plastic	2	0
Natural Stone	2	10
Wood	0	2

As you will note, concrete is the primary material used in the construction of the gravestones analyzed. This is contributed to the easy access of obtaining this material

and the low cost. The majority of the granite gravestones are provided by the military for veterans.

Distinctive Gravestones

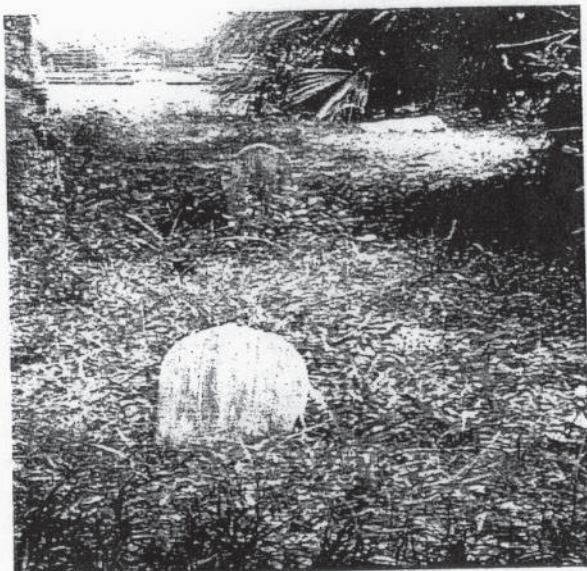

Figure 14. West view of wood gravestones

Figure 15. East view of wood tombstones

Wood

The most unusual are two wood gravestones. The inscriptions are illegible on either of them due to weathering, but there are marks in the wood which are hand-carved, based upon the uneven depths of these marks. Additionally, both gravestones are located together in Section 3, one of the oldest sections in this

cemetery. Figures 15 and 16 show both the east of west view of these gravestones. These pictures are in color due to the vast amount of shading in this area that made a black and white picture insignificant.

As evident from the pictures, the design of each are different. The largest gravestone is in the shape of a formed tablet on top. The smallest is just a

curved cut piece of wood. No markings are significant of any decoration on either. It appears that the only way these gravestones have been protected so long is due to their location between two areas of trees. This made it impossible for large mowers to cut between them. I could not identify the wood, but based on the long grain and soft nature, it would appear to be of local origin. My best guess would be of some type of pine or cedar.

Oldest

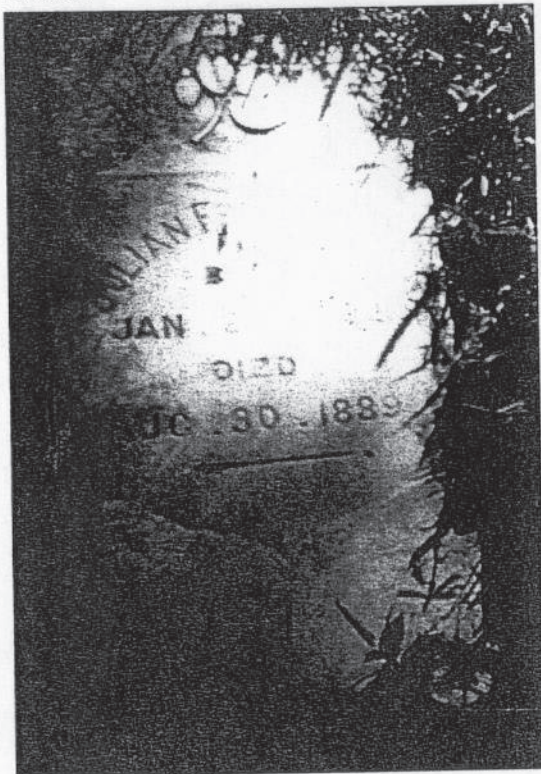

Figure 16. Oldest tombstone

The oldest identified gravestone is that of Jullian Freddy Allen (Section 5-10) who died in December 1889 (figure 17). I discovered this gravestone broken on the ground covered over by years of turf grass growth. Even though I unearthed it in a questionable condition, the detail of the lettering and decoration is amazing. It is constructed of a rough white granite, with a smooth area designated for the lettering. There is a single decoration on top of what appears to be a piece of curled ivy with four leaves in open view.

The lettering is very bold due to the depth of the engraving. There also appears to be some type of "dark paint substance" that is utilized as a fill for the lettering.

Same Type

Figure 17. "Same Type" tombstone

In sections 1 and 5, there are many identical gravestones (Figure 18). These are from the period of 1920 - 1940. The top piece is slightly rectangular in shape and approximately 10" thick. They are constructed of poured concrete top attached to a poured concrete base. It is noted that the material utilized in attaching the stone to the base was excellent as none are detached. On the top of the upper section was either the family name of the deceased or a carved decoration of a flying dove.

The bottom line of the inscription always stated "Asleep in Jesus Arm". The majority of these

gravestones are in excellent condition as they are not badly weathered nor damaged. I did locate several of these distinctive types of gravestones moved under trees and knocked.

Military

There are fifty-one military provided gravestones in this cemetery, forty-eight which are upright. Each provided the name, date of birth/death, branch of services, rank, company, and war participated in, if applicable. They either have no decoration or a cross within a circle on top. They all appear to be made of white or light gray marble. Several of the upright gravestones are either broken off at the base or buried underground at least half-way up the stone. It is difficult to justify this burying effect. The first thought is due to

soil run off during heavy rains and the natural gathering of soil around the base. This theory was not factual for all found in this condition. Possibly, it is due to the weight of the gravestone and the sharp edges on the base which created a natural cutting effect into the ground over the years. This burying effect occurred only on upright military gravestones in this cemetery.

Metal Markers

There are thirty-five metal gravestones in this cemetery. These are generally the type provided by the funeral home as a courtesy to mark the gravesites at the time of burial. From my discussions, it appears these markers remained due to the economic conditions of the families being unable to provide actual gravestones for their deceased relatives. These are metal, possibly aluminum due to the lack of rusting, 6" x 4" with two lines for the placement of the name and date of birth and death. The letters are either small black plastic which are slid into the line area or black plastic vinyl letters which are attached to the lined area on each. Once again, due to weathering and age, many of the letters or plates are missing. I located several plates in the bushes and under trees which were not actually associated to a gravesite. These are recorded based on the section and location of discovery.

Inscriptions

Hand-written

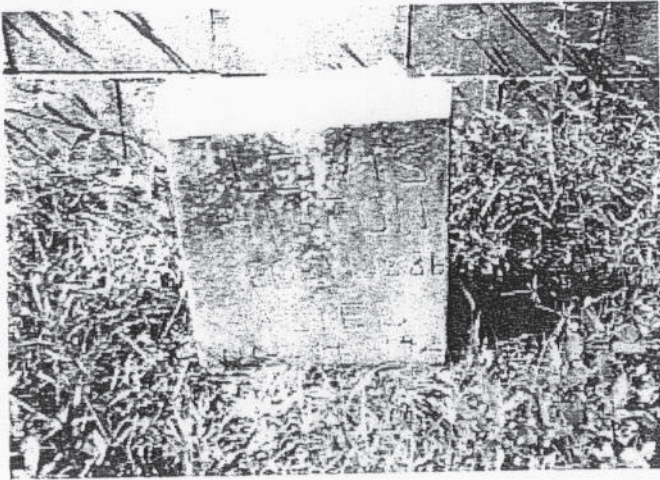

Figure 18. Hand-written inscription (1)

Fourteen gravestones have hand-written inscriptions. They all appear to be non-professional type gravestones as they are constructed of poured concrete. None contain any noted decorations. The inscriptions are mostly the name and date of birth and death, but there are two noted inscriptions as follows:

- “Mark the Perfect Man and Behold the Upright For the End of That Man is Peace”
- “Here lies Aunt Lizzie”

Figure 19, Hand-written inscription (2)

Other Inscriptions

Of the gravestones, many had typical inscriptions, including wife, mother, aunt, son, and daughter. But several have unique inscriptions, including:

- “He was a good and faithful citizen”
- “Gone but not Forgotten”
- “Here I Lie My Burden”
- “God Doeth All Things Well”
- “Blessed are the dead who died in the Lord”

- "Rest on dear mother and take Your rest, for someday, Soon or late, we to shall meet you in the sweet beyond."
- "Thy God has claimed thee as his"
- "The dead that dieth in the Lord"
- "Here I Lay my Burden Down, Change the Cross into a Crown"

Decorations

Carved

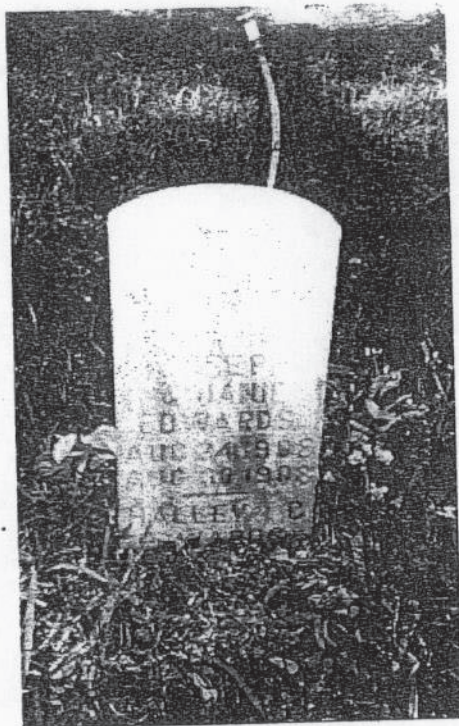

Some of the decoration, particularly on more ancient gravestones are very intricate and detailed in there artistry. These are typically found on the marble and granite gravestones. There were several representative designs of praying hands, open flowers, bibles, doves flying, crosses, etc. The following are a listing of the unique decorations noted:

- Fisted right hand with first finger pointed upward - all enclosed in a circle
- Backward crest of a new moon
- Vines with delicate leaves blooming across it which wrapped the sides and top of the gravestone

Figure 20. Unique Decoration

- 3-leaf cluster with a closed bulb distinctively hanging off of it
- Crown with the gates of heaven opening
- Multi-colored pebbles forming a cross on each corner of gravestone
- Praying hands clasped encircled in a flower wreath

- Several with forms of a Masonic symbol on top
- Large seven point crown on top

Several of the gravestones are shaped as crosses but the majority were various heights and widths in the shape of squares or rectangles. There are several husband's and wife's who share one gravestone. The gravestones during the 1920 - 1940 era had one vertical stone with both names on it. Some of the more recent ones are longer stones with the inscriptions each. There is one gravestone where it appears all three family members died at one time and were placed within one large in-ground vault

Figure 21. Decoration on top with inlaid tile on top. (Figure 13).

Attached

There are several attached decorations, either directly to the vault top or to the gravestone. The most unique is that of a round cobalt blue porcelain bulb with the name and date of the deceased inside the glass enclosure (Figure 23). It reminds one of the top of an old gasoline pump from the eras gone by. It is in amazingly good shape. There are also large concrete crosses attached to the top of four vaults, tall pointed concrete poles by each of the four corners of one vault, and many other vaults have multi-colored stones attached to the top.

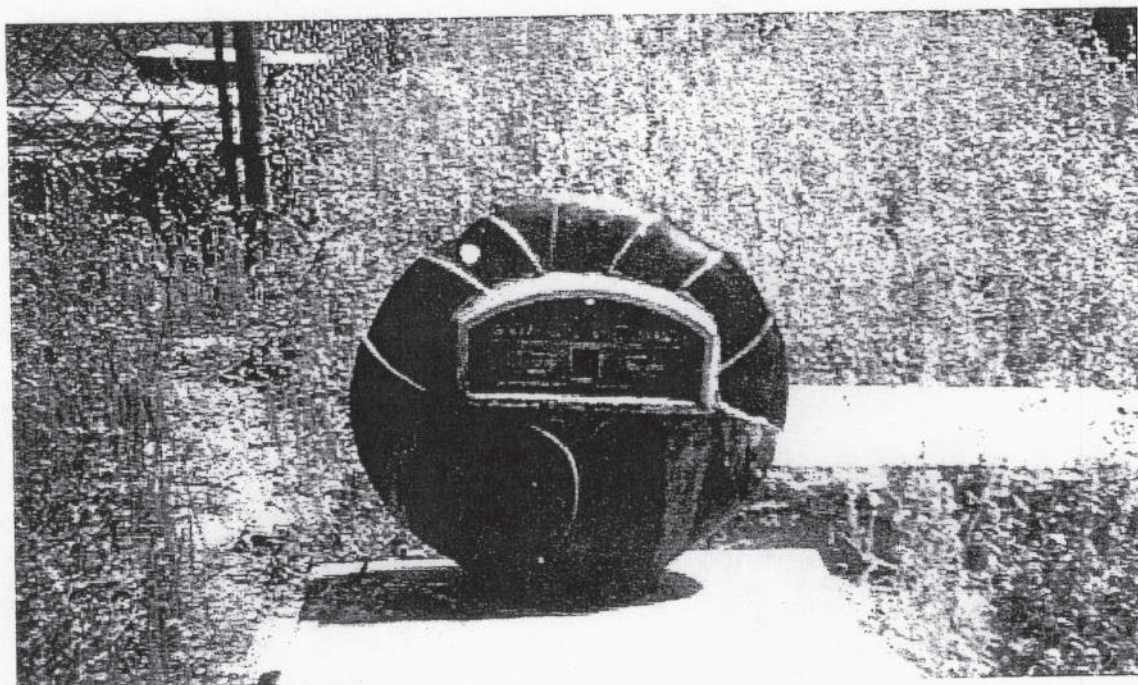

Figure 22. Blue attached decoration

Some of the gravestones appear to have been placed upon the grave sites during the more recent years. In speaking to Ms. Dunn regarding her descendants, the Sheffield's, her brother and herself began almost ten years ago placing gravestones on their family plot. They have just recently completed this costly process.

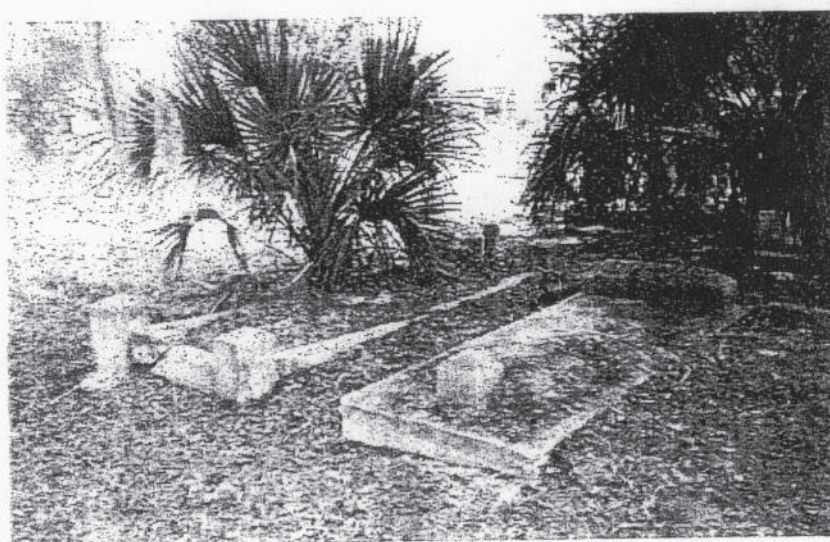

Figure 23. Decoration attached to top of vault

SUMMARY

Lee Terrel Held For Murder Of Chester Watts Last Night

Lee Terrel, well known negro, is in jail today, charged with the murder of Chester Watts, another well known Cocoa negro. Terrel is alleged to have stabbed Watts last night about 11:30 o'clock in the restaurant of John Brown, another negro, on Magnolia avenue in the negro quarters. Terrel was arrested by Night Officer H. L. Evans and Police Chief Maxwell.

An inquest will be held today before Justice of the Peace O. L. Brown to place the blame in the death of Watts.

Lee Terrel is said to have been fighting with John Brown about money matters last night when Watts walked back of Terrel. Terrel is said to have struck back with an open knife, inflicting a deep wound in the left lung of Watts. Watts was carried to a physician's office but when he arrived there he was dead.

Cocoa Post-Office 11--

Due to this cemetery being over hundred years old and its ethnic origins, it was extremely interesting to index and gather the information for the field study. It is amazing how much history is associated with such a cemetery and the innumerable bits and pieces of ethnic antiquity which are stored there. One such piece of information I located was in the Cocoa Tribune dated April 8, 1937. The article discusses the killing of Chester Watts (Section) by Lee Terrel (figure 25).

Figure 24. Newspaper article regarding one of the deceased

As stated earlier, I visited many cemeteries within my community prior to choosing the Cocoa Hilltop Cemetery

for my field study. The other cemeteries are beautiful and well appointed with large family plots, gravehouses, extraordinary lichgates, gorgeous tombstones and beautiful landscaping. The ethnic origin and associated history of this cemetery is very reflective of the lower social-economic status of many of the deceased. That is why I decided to use this cemetery for my field study.

It is very hard today for people to relate back to the plight of many of our ancestors and residents of the community during the late 1800's and early 1900's. Just by visiting and walking around a cemetery like the Cocoa Hilltop Cemetery can definitely allow one to

begin to understand the hardships and fortitude needed to survive during that time. It also allows one to focus on how fortunate we are today in this age. I do admit that I fail to understand why such an area of such historical value can be so poorly maintained and protected. I would highly recommend to anyone who is interested in the ethnic culture of the blacks in Central Florida during the last century to visit this cemetery.
